
TABLE OF CONTENTS

HIGHLIGHTS	5	Mathematical Tools or Statistics, Monte Carlo,	
INTRODUCTION	11	Group Theory	
PARTICLE PHYSICS SUMMARY TABLES		37. Probability (rev.)	467
Gauge and Higgs bosons	27	38. Statistics (rev.)	472
Leptons	30	39. Monte Carlo techniques (rev.)	485
Quarks	33	40. Monte Carlo event generators (rev.)	488
Mesons	34	41. Monte Carlo neutrino event generators (new)	498
Baryons	79	42. Monte Carlo particle numbering scheme (rev.)	501
Searches (Supersymmetry, Compositeness, <i>etc.</i>)	94	43. Clebsch-Gordan coefficients, spherical harmonics, and d functions	505
Tests of conservation laws	96	44. SU(3) isoscalar factors and representation matrices	506
		45. SU(n) multiplets and Young diagrams	507
REVIEWS, TABLES, AND PLOTS		Kinematics, Cross-Section Formulae, and Plots	
Constants, Units, Atomic and Nuclear Properties		46. Kinematics	508
1. Physical constants (rev.)	109	47. Resonances (new)	513
2. Astrophysical constants and parameters (rev.)	110	48. Cross-section formulae for specific processes	517
3. International System of Units (SI)	112	49. Neutrino cross section measurements (rev.)	526
4. Periodic table of the elements	113	50. Plots of cross sections and related quant. (rev.)	530
5. Electronic structure of the elements	114		
6. Atomic and nuclear properties of materials	116	PARTICLE LISTINGS	
7. Electromagnetic relations	118	Gauge and Higgs bosons	
8. Naming scheme for hadrons	120	(γ , gluon, graviton, W , Z , Higgs, Axions)	559
Standard Model and Related Topics		Leptons	
9. Quantum chromodynamics (rev.)	122	(e , μ , τ , Heavy-charged lepton searches, Neutrino properties, Number of neutrino types Double- β decay, Neutrino mixing, Heavy-neutral lepton searches)	647
10. Electroweak model and constraints on new physics (rev.)	139	Quarks	
11. Status of Higgs boson physics (new)	161	(u , d , s , c , b , t , b' , t' (4^{th} generation), Free quarks)	725
12. The Cabibbo-Kobayashi-Maskawa quark-mixing matrix (rev.)	214	Mesons	
13. CP violation in the quark sector (rev.)	223	Light unflavored (π , ρ , a , b) (η , ω , f , ϕ , h)	773
14. Neutrino mass, mixing, and oscillations (rev.)	235	Other light unflavored	895
15. Quark model (rev.)	259	Strange (K , K^*)	900
16. Grand Unified Theories	270	Charmed (D , D^*)	965
17. Heavy-quark & soft-collinear effective theory (rev.)	279	Charmed, strange (D_s , D_s^* , D_{sJ})	1018
18. Lattice quantum chromodynamics (rev.)	286	Bottom (B , V_{cb}/V_{ub} , B^* , B_J^*)	1042
19. Structure functions (rev.)	296	Bottom, strange (B_s , B_s^* , B_{sJ}^*)	1224
20. Fragmentation functions in e^+e^- , ep and pp collisions (rev.)	311	Bottom, charmed (B_c)	1239
Astrophysics and Cosmology		$c\bar{c}$ (η_c , $J/\psi(1S)$, χ_c , h_c , ψ)	1248
21. Experimental tests of gravitational theory (rev.)	322	$b\bar{b}$ (η_b , Υ , χ_b , h_b)	1336
22. Big-Bang cosmology (rev.)	327	Baryons	
23. Big-Bang nucleosynthesis (rev.)	339	N	1371
24. The cosmological parameters (rev.)	345	Δ	1428
25. Dark matter (rev.)	353	Λ	1452
26. Dark energy (new)	361	Σ	1471
27. Cosmic microwave background (rev.)	369	Ξ	1498
28. Cosmic rays (rev.)	378	Ω	1511
Experimental Methods and Colliders		Charmed (Λ_c , Σ_c , Ξ_c , Ω_c)	1514
29. Accelerator physics of colliders (rev.)	386	Doubly charmed (Ξ_{cc})	1535
30. High-energy collider parameters (rev.)	397	Bottom (Λ_b , Σ_b , Σ_b^* , Ξ_b , Ω_b , b -baryon admixture)	1536
31. Neutrino beam lines at high-energy (rev.)	397	Miscellaneous searches	
32. Passage of particles through matter (rev.)	398	Monopoles	1547
33. Particle detectors at accelerators (rev.)	413	Supersymmetry	1554
34. Particle detectors for non-accelerator phys. (rev.)	444	Technicolor	1622
35. Radioactivity and radiation protection (rev.)	460	Compositeness	1631
36. Commonly used radioactive sources	466	Extra Dimensions	1637
		Searches for WIMPs and Other Particles	1649
		INDEX	1661
